- Note:
- C1: input capacitors; C2, C5: output storage capacitors, they must be connected externally.
 - We recommend using an electrolytic capacitor with high frequency and low ESR rating for C3 (refer to manufacture's datasheet). Combined with C2, L2, they form a pi-type filter circuit. Choose a capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C4, C7 is a ceramic capacitor, used for filtering high frequency noise.
 - A suppressor diode (TVS) is recommended to protect the application in case of converter failure and specification should be 1.2 times of the output voltage.
 - The distance of the original secondary side isolation belt is greater than 6mm to meet the safety requirements; In the peripheral layout, it is also necessary to pay attention to the creepage distance greater than 6mm and the electrical clearance greater than 5.5mm, which can meet the certification as a whole together with the periphery.
 - LDM (2.2mH, P/N: 12050564); L1/L2 (2.2uH, P/N: 12050329) Mornsun quotation is available.
