

## SCM3425ASA High-speed CAN Transceiver

### Features

- Compatible with the "ISO 11898" standard fully
- High-speed CAN, Support CANFD and data rates up to 5Mbps ;
- 5V power supply, 3.0-5.5V IO interface ;
- Receiver common mode input voltage :  $\pm 30V$
- Bus Fault Protection :  $\pm 42V$
- Transmit Data (TXD) Dominant Time-Out Function
- An unpowered node does not disturb the bus lines ;
- The bus supports maximum 110 nodes ;
- High Electromagnetic Immunity ;
- Meet AEC-Q100 automobile standard ;

### Applications

- Industrial automation
- Building automation
- Smart meter
- Long-distance signal interaction and transmission

### Package

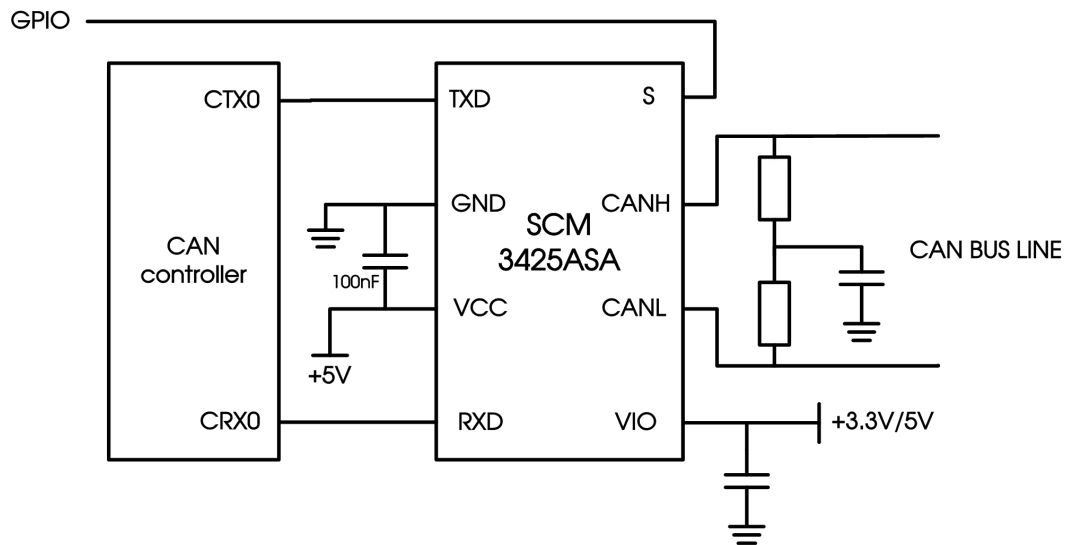

Product optional package: SOP-8, Screen Printing information please see "Order Information"

### Functional Description

The SCM3425ASA is an interface chip used between the CAN protocol controller and the physical bus. It can be used in many fields such as trucks, buses, cars, industrial control. It can reach speeds up to 5Mbps. The SCM3425ASA has the ability to differentially transmit between the bus and the CAN protocol controller.

### Typical Application

Note: GPIO means universal I/O port.

## Truth Table

TABLE 1 CAN Transceiver Truth Table

VCC	TXD	S	CANH	CANL	BUS STATE	RXD
4.5 to 5.5V	L	L(Or left floating)	H	L	Dominant	L
4.5 to 5.5V	H(Or left floating)	X	0.5V <sub>CC</sub>	0.5V <sub>CC</sub>	Recessive	H
4.5 to 5.5V	X	H	0.5V <sub>CC</sub>	0.5V <sub>CC</sub>	Recessive	H
0<V <sub>CC</sub> <4.75V	X	X	0V<V <sub>CANH</sub> <V <sub>CC</sub>	0V<V <sub>CANL</sub> <V <sub>CC</sub>	Recessive	X

(1)H=High-level ; L=Low-level ; Z=high resistance ; X=Any level

TABLE 2 Device function table

INPUTS		OUTPUTS		Bus State
TXD	S	CANH	CANL	
L	L(or left floating)	H	L	Dominate
H (Or left floating)	L(or left floating)	Z	Z	Recessive
X	H	Z	Z	Recessive

(2)H=High-level ; L=Low-level ; X=Any level

TABLE 3 Receiver function table

V <sub>ID</sub> =CANH-CANL	RXD	Bus State
V <sub>ID</sub> ≥0.9V	L	Dominate
0.4<V <sub>ID</sub> <0.9V	?	?
V <sub>ID</sub> ≤0.4V	H	Recessive
Open	H	Recessive

(3)H=High-level ; L=Low-level ; ? =indeterminacy

## Pin Configurations and Functions

Pins	Name	Pin Functions
1	TXD	Transmit data input
2	GND	Ground
3	V <sub>CC</sub>	Supply voltage
4	RXD	Receive data output
5	V <sub>IO</sub>	Transceiver I/O level shifting supply voltage
6	CANL	Low level CAN bus input line

7	CANH	High level CAN bus input line
8	S	Silent mode and high-speed mode (Low is high-speed)

## Absolute Maximum Ratings

Sym.	Parameters	Value.	Unit.
V <sub>CC</sub>	Supply Voltage	-0.3 to +7	V
V <sub>IO</sub>	Transceiver I/O level shifting supply voltage	-0.3 to +7	V
TXD , RXD , S	MCU Side Port	-0.3 to +7	V
CANL , CANH	Bus Side Input Voltage	-42 to 42	V
	Storage Temperature Range	-65 to 150	°C
	Operating Ambient Temperature Range	-40 to 125	°C
	Work junction temperature	-40 to 150	°C

The maximum limit parameter value means that exceeding these values may cause irreparable damage to the device. Under these conditions, it is not conducive to the normal operation of the device. Continuous operation of the device at the maximum allowable rating may affect device reliability. The reference point for all voltages is ground.

## Recommended Operating Conditions

Parameters	Sym.	Test Conditions	Min.	Max.	Units
Supply Voltage	V <sub>CC</sub>		4.5	5.5	V
Transceiver I/O level shifting supply voltage	V <sub>IO</sub>		3.0	5.5	V
Maximum Baud Rate	1/tbit	Non-return to zero code	5		Mbaud
CANH, CANL, Input Voltage	V <sub>can</sub>		-42	+42	V
BUS Differential Output Voltage	V <sub>diff</sub>		1.5	3.0	V
Operating Ambient Temperature Range	T <sub>amb</sub>		-40	125	°C

## Electrical Characteristics

Unless otherwise stated, V<sub>CC</sub>=5V±5%, Temp=TMIN to TMAX, typical value is V<sub>CC</sub>=+5V, Temp=25°C

Driver Electrical Characteristics

## General Description

The SCM3425ASA is an interface chip used between the CAN protocol controller and the physical bus. It can be used in many fields such as trucks, buses, cars, industrial control. It can reach speeds up to 5Mbps. The SCM3425ASA has the ability to differentially transmit between the bus and the CAN protocol controller. SCM3425ASA is compatible with the "ISO 11898" standard.

**Short-circuit protection:** The drive stage of the SCM3425ASA has current-limiting protection to prevent the drive circuit from short-circuiting to positive and negative supply voltages. The power dissipation increases when a short circuit occurs. The short-circuit protection function protects the driver stage from damage.

**Over-temperature protection:** The SCM3425ASA has over-temperature protection. When the junction temperature exceeds 160°C, the current in the driver stage will decrease. Because the drive tube is the primary energy consuming component, current reduction can reduce power consumption and reduce chip temperature. At the same time, the rest of the chip remains functional.

**Dominant time-out function:** If the pin TXD is forced to a permanent low level due to a hardware or software application failure, the built-in TXD dominant timeout timer circuit prevents the bus line from being driven to a permanent dominant state (blocking all network traffic). The timer is triggered by the negative edge on pin TXD.

If the low level on pin TXD lasts longer than the internal timer value ( $t_{dom}$ ), the transmitter will be disabled and the drive bus will enter a recessive state. The timer is reset by the positive edge on pin TXD.

**Control mode:** Control pin S allows two operating modes to be selected: high speed mode or silent mode.

The high speed mode is the normal operating mode and is selected by grounding the pin S. If pin S is not connected, it is the default mode. However, to ensure EMI performance in applications that only use high speed mode, it is recommended to ground pin S.

In silent mode, the transmitter is disabled. All other IC functions continue to run. The silent mode is selected by connecting pin S to  $V_{CC}$  and can be used to prevent network communication congestion due to out of control of the CAN controller.

## Design Circuit Expansion

Figure 12. Isolated Application Circuit Schematic for Converting TTL/CMOS to CAN Bus

## Power Usage Recommendations

Connecting the 0.1 $\mu$ F bypass capacitor as close as possible to the V<sub>CC</sub> pin of the device.
